AIBTC

AI POWERED
DEFI PROTOCOL

WHITEPAPER

This crypto-asset white paper has not been approved by any competent authority in any Member State of the European Union. The offer of the crypto-asset is solely responsible for the content of this crypto-asset white paper. This Whitepaper has been released on 01/12/2025.

ABSTRACT

AIBTC is an experimental smart staking protocol deployed on Base Network.

It leverages an AI-driven yield aggregation system designed to identify and allocate liquidity toward the most efficient opportunities across the DeFi landscape. Users can stake assets in a non-custodial environment, while the AI continuously evaluates risk-adjusted performance and reallocates positions in real time.

The protocol also introduces the lab, a gamified NFT layer, where specific NFTs function as reward boosters.

By holding these NFTs, users may receive enhanced staking returns, creating additional incentive dynamics within the system. As an experiment on Base, aibtc explores the intersection of automated yield optimization, on-chain incentives, and NFT-based gamification.

ROADMAP AND MILESTONES

PHASE 1 — INITIAL TOKEN OFFERING (ICO)

Launch of the AIBTC Initial Coin Offering on Base.

The token will be non-transferable during the ICO period to prevent early speculative trading.

The offering will have a hard cap and a strictly limited supply.

All unsold tokens will be permanently burned, ensuring the circulating supply reflects actual market participation.

PHASE 2 — OFFICIAL LAUNCH & TRADING UNLOCK

Upon completion of the ICO, the token becomes fully transferable, and trading is unlocked permanently.

Deployment of the core staking contracts.

Integration of AI-driven yield aggregation engine (early version).

Initial supported assets for staking:

AIBTC ETH USDC BTC

ROADMAP AND MILESTONES

PHASE 3 — ASSET EXPANSION

Gradual onboarding of additional staking assets.

Major DeFi assets across the Base ecosystem

Additional stablecoins and yield-bearing derivatives

Each new asset integration is paired with updated AI strategies and risk parameters.

PHASE 4 — THE LAB LAUNCH

Activation of The LAB, an on-chain experimental layer introducing four utility NFTs. Each NFT provides distinct reward-boosting mechanics:

AIBTC Booster NFT

Stablecoin Booster NFT

Blue-Chip Booster NFT

Dynamic Meme Reward NFT
Grants access to a rotating monthly reward in a different memecoin, selected dynamically by the system.

The LAB serves as a gamified extension of the protocol, introducing modular incentive frameworks and experimental mechanics.

TOKENOMICS

TOKEN OVERVIEW

Token Name: Bitcoin AI

Ticker: AIBTC

Network: Base

Standard: ERC-20

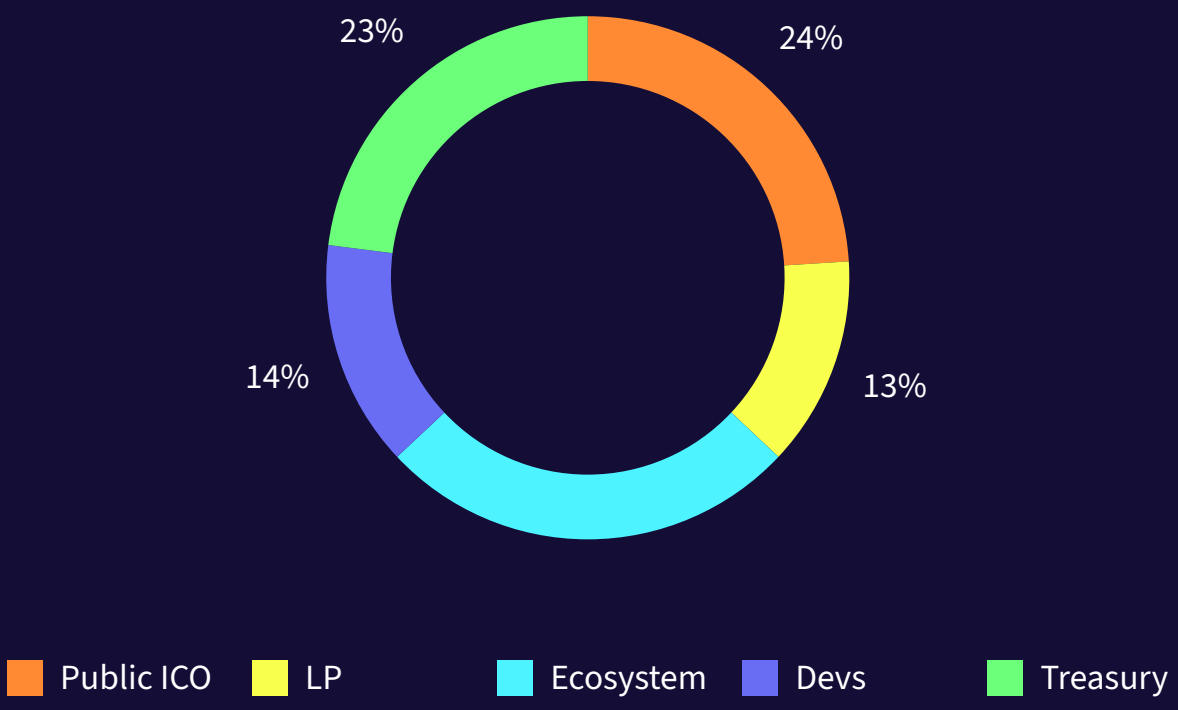

Total Supply: 21.000.000

Initial Sale: Conducted via a limited ICO; all unsold tokens will be permanently burned.

The token is designed primarily as a utility and governance asset within the protocol, enabling users to access staking rewards and interact with the LAB NFT system

TOKENOMICS

TOKEN DISTRIBUTION

VESTING & LOCK MECHANISMS

To promote stability and avoid early market imbalance:

Devs tokens: locked with 180 days linear vesting.

Treasury tokens: released progressively based on protocol needs.

ICO tokens: Non-transferable until the official launch; transferability is then unlocked **permanently**.

TECHNICAL INFORMATION

BLOCKCHAIN & DEPLOYMENT

AIBTC is deployed on Base, a Layer 2 scaling solution for Ethereum.

Base provides:

High throughput: Significantly reduced gas fees compared to Ethereum L1.

Security inherited from Ethereum: Transactions and smart contracts benefit from Ethereum's decentralization and security model.

EVM compatibility: Full compatibility with Ethereum tools, libraries, and wallets.

The choice of Base enables a balance of low-cost operations and high security, making it suitable for AI-driven yield aggregation, staking, and NFT-based gamification.

TECHNICAL INFORMATION

TOKEN STANDARD

The protocol's native token, AIBTC, follows the ERC-20 standard:

Standardized functionality: Transfer, balance tracking, allowance management.

Integration-friendly: Compatible with wallets, exchanges, DeFi protocols, and analytics tools.

Audit-ready: Code follows widely recognized best practices to ensure safety and reliability.

SMART CONTRACT ARCHITECTURE

The protocol uses a modular and upgradeable contract architecture to allow future improvements and maintain security

Proxy Pattern (Upgradeable Contracts):

All core contracts are deployed as upgradeable proxies (EIP-1967 Standard).

Enables seamless updates of logic without migrating user funds.

Role: Developer, Designer and Operator of the AIBTC protocol

RISK DISCLAIMERS

It is important that investors understand the following risks:

In the future, AIBTC may lose its value in part or in full;

AIBTC may not always be transferable;

AIBTC may become illiquid;

AIBTC may not be exchangeable for the goods or services described in this white paper, especially in the case of a failure or discontinuation of the crypto-asset project;

AIBTC is not covered by investor compensation schemes under Directive 97/9/EC of the European Parliament and of the Council;

AIBTC is not covered by deposit guarantee schemes under Directive 2014/49/EU.

Prospective holders should base any decision to purchase AIBTC on the content of this white paper as a whole, not on the summary alone.

The public offer of AIBTC does not constitute an offer or solicitation to purchase financial instruments. Any such offer or solicitation can be made only by means of a prospectus or other offer documents pursuant to applicable national law.

This white paper does not constitute a prospectus as referred to in Regulation (EU) 2017/1129 of the European Parliament and of the Council, or any other offer document pursuant to Union or national law.
